PROFILE

Full stack developer since 2021 and Tech Lead since 2023 at Crombie. I led five teams (5 to 16 people) for clients in the US and Argentina across fintech, logistics, events and IoT, and directed the first two editions of Escuelita, the company's talent incubator. Applied AI and AWS Serverless specialist (two certifications) with my own products in production. I'm drawn to teams that need order, products that need building and systems that need to run cheap.

EXPERIENCE

Crombie · Developer

2026 – present

- **NFTYDoor** (US mortgage fintech): identity, credit and co-borrower backend. The team called me back on the strength of the backend foundations I built in 2022.
- **La Muni en tu Celu** (City of Santa Fe): citizen app for procedures, appointments, payments and alerts. Development and API security review.

Crombie · Tech Lead

Jan 2023 – 2026

Five teams, five projects. One-on-ones, measurable sprints, environments and automated deploys, client communication (in English when needed) and code whenever someone was missing.

> **Skylightlending · NFTYDoor** Feb 2024 – 2026 · 16 people
> Solar-panel lending platform. Reversed sky-high turnover, split the repository and infrastructure away from the main product and migrated to AWS Serverless with SST at lower cost. The client relationship extended the project by more than a year.
>
> **Fulter** Sep 2023 – Feb 2024 · 7 people
> Turnkey shipment-logistics platform on top of a legacy system, with a hard deadline. Apps published in the stores; the client continued the project after the MVP. AWS, React Native, Next.js, Node.js, MySQL.
>
> **Skedules Live** Jun – Sep 2023 · 7 people
> Events and calendar platform. First project led in English; Scrum, develop/staging/prod environments and automated deploys from scratch. AWS, TypeScript, Next.js, PostgreSQL.
>
> **Qwiky** Apr – Jun 2023 · 7 people
> Social network for bloggers: post recommendations, scalability and an iOS/Android app. AWS, TypeScript, React Native, NestJS, PostgreSQL.
>
> **Datision** Jan – Apr 2023 · 5 people
> Alert platform for AI-powered IoT devices. Joined a struggling team, stabilised it and met the goals. TypeScript, Python, React, Django, PostgreSQL.

Crombie · Escuelita Director

oct 2022 – mar 2023 · jun – Dec 2023

Crombie's talent incubator: people with no experience who learn the industry's frameworks and join real projects. I directed the first two editions (8 h a week): selection, content, classes, feedback, catch-up lessons and recommending who was ready for a project. Material: github.com/escuelitacrombie.

Crombie · Full Stack Developer

abr 2021 – Jan 2023

- **NFTYDoor** (2022): mortgage-lending fintech. First time with AWS Serverless; built the backend foundations and ended up leading its development. Serverless Framework, React, TypeScript.

- **WellUnity** (2021): wellness platform with payments and live classes. Integrated Stripe, Twilio and the streaming APIs. React, TypeScript.
- **Recreo** (2021): events app and website for the province of Buenos Aires. TypeScript, React, Laravel, GraphQL, MySQL.

OWN PRODUCTS

- **Seguridar** (2025 –): alerts parents to risk signals on their kids' devices without surveillance. Windows/Android agents, CLIP vision engine, NestJS API, PostgreSQL, Next.js dashboard; Terraform, ECS, RDS, GitHub Actions.
- **Constelaciones Familiares** (2026): website with online booking and admin panel. SST, OpenNext, Lambda, CloudFront, DynamoDB.
- **IA-Trader** (2026): bot that tests strategies on the S&P 500 with a backtest since 2007. EventBridge, Lambda (Python), DynamoDB, S3.
- **Custom software** (2026): health-insurer deduction reconciliation, road-construction certification over WhatsApp and OCR meter reading. React, TypeScript, Claude API.
